Personal Projects

- **Portfolio Website**
  - Developed and launched a multifaceted portfolio website demonstrating coding expertise, design sensibility, and showcasing a variety of diverse technical projects.
  - Incorporated FormSubmit for direct email invoicing via the website's contact form.
  - Utilized Vercel's hosting and DNS services to deploy my portfolio website for public access.
- **Poseidon's Personal Dashboard**
  - Designed, built, and deployed an efficient, productivity-focused personal dashboard.
  - Managed user sign-in, authentication, and route protection with NextAuth.js & Google OAuth.
  - Enabled data, file, and image storage on the dashboard using Firebase's serverless backend.
  - Developed a tracker for online gaming matches with team-specific search functionality.
- **Blog Website**
  - Utilized React, Firebase, and Typescript to create an engaging and functional blog website.
  - Deployed Firebase Auth to provide secure user access and seamless sign-ins.
